

Bamboo Decking Tiles

Strand Woven Bamboo

At any time and in any place, Our decking may be paved according to different needs with great flexibility. All the deck tiles in this page are of small size and light weight and can be covered directly and conveniently on floor surfaces. The decking is ideal for patios, walkways, decking refurbishments; hot tub surrounds; porch and entrance ways, etc. The Tiles can easily be cut to shape and can even be used in situations where conventional decking would not be suitable such as balconies and roof gardens, or where to install a conventional deck would mean the removal/digging up of the existing surface to accommodate the deck joists.

Model : 900-SWB-OF4

General Description:

- Thread-woven bamboo is produced by weaving long strips of bamboo together then laminated them under incredible pressure. This produces a floor that is even harder and denser than traditional bamboo flooring, with a grain more similar to hardwood flooring.

Advantages:

- It absolutely differs from the traditional bamboo flooring.
- Compared with the traditional bamboo flooring, our product possesses not only higher density and rigidity but also lower free formaldehyde releasing.
- The techniques and composition distinguish our product from the traditional bamboo flooring.
- The composition of our product is bamboo strand instead of bamboo piece.

Specifications:	
Material:	100% Moso Bamboo
Finish:	pre-coated with protective decking oil
Tile size:	305mm x 305mm, 910 x 305mm
Height of tile:	29mm
Thickness of bamboo slats:	14mm
Thickness of plastic base:	15mm
Weight of tile:	approx. 1.6KG
Tile base:	UV resistant polyethylene
Packing:	
Pcs. per carton:	10 tiles (Tripe size 4tiles)
Area covered per carton:	0.9M ²
Carton weight:	16KG
0:Original, C:Carbonized, F:Flat	
Model:	300-SWB-OF4, 300-SWB-C F4 900-SWB-OF4 900-SWB-C F4
